When mosquitoes attack, go after them with *BAYTEX (fenthion) insecticide. Remember, *only* BAYTEX insecticide offers *all* of these advantages:

- The *only* insecticide registered for ultra-low-volume control of adult *and* larval mosquitoes (at the adult level), including species which have developed resistance to DDT and malathion.
- Fits any application practice or municipal program.
- Long-lasting effectiveness (more than 2 weeks for larvae) gets the job done the *first* time. Reduces number and frequency of sprays...saves time, chemical and labor costs, wear on equipment.
- Can be applied with standard aerial, ground, or U.L.V. sprayers, without danger of corrosion to units or hoses.
- Convenient liquid, granular and dust formulations for every need.
- Also provides excellent control of flies. Can be applied on any surface without loss of biological effectiveness or phytotoxicity.

This season, be sure to "shoot" ditch banks...catch basins... standing pools...marshes...and anywhere else that mosquitoes are breeding in populated or rural non-crop areas with BAYTEX insecticide. You'll be more than repaid in fast, long-lasting, economical mosquito control. 6929

Don't shoot until you see the whites of their eyes
